Поэтому в начале 1990-х годов в России возникла необходимость в разработке и внедрении стандартов, позволяющих обеспечить единство измерений. В настоящее время в России действует стандарт ГОСТ 8.001-82, который устанавливает требования к метрологическим службам. Однако, этот стандарт не учитывает современных требований к метрологии, поэтому в настоящее время в России ведется работа по разработке нового стандарта.

These data indicate that the two major components of the *in vitro* model of the *in vivo* system are the *in vitro* model of the *in vivo* system. The *in vitro* model of the *in vivo* system is the *in vitro* model of the *in vivo* system.

These two sets of variables are treated as independent in the subsequent analysis, and the results are presented separately. The results are then compared across the studies in section 5.4. The second set of variables refers to the degree to which respondents believe that the use of information technology is a good thing, and is presented in section 5.5. The third set of variables refers to the degree to which respondents believe that the use of information technology is a bad thing, and is presented in section 5.6. The fourth set of variables refers to the degree to which respondents believe that the use of information technology is a good thing, and is presented in section 5.7.

Важно отметить, что в настоящее время в России отсутствуют единые стандарты и методики для оценки качества жизни. Это приводит к тому, что результаты исследований, проведенных в разных регионах, могут быть несопоставимыми. Поэтому необходимо разработать единые стандарты и методики для оценки качества жизни, что позволит более точно и объективно оценивать состояние здоровья населения.
